Evolution history

Objective

Case MY-Q3-21

CLINICAL DATA: Chronic lymphocytic leukemia (by flow cytometry).

MACROSCOPIC DESCRIPTION

Labeled deep right cervical lymph node, in formol multiple irregular fragments of soft whitish brown tissue are received, in a volume approximately 2 cc. Everything is processed into a cassette.

MICROSCOPIC DESCRIPTION

Multiple lymph node fragments are seen with altered structure (no visualization of lymphoid follicles or germ centers) and diffuse infiltration by small to intermediate-sized lymphocytes.

COMMENT: The fragmentation of the sample hinders its proper diagnostic approach. Complementary immunohistochemistry studies are recommended for the integral evaluation of this material.

DIAGNOSIS

DEEP RIGHT CERVICAL LYMPH NODE. RESECTION:

- LYMPHOID INFILTRATION AND ESTRUCTURAL ALTERATION TO BE CLASSIFIED BY COMPLEMENTARY IMMUNOHISTOCHEMICAL STUDIES

- SEE MICROSCOPIC DESCRIPTION AND COMMENT

A stylized, handwritten signature in black ink, consisting of several loops and a long horizontal stroke.
